

SUMMARY

Systems focused software engineer with significant open source contributions across CNCF projects spanning security policy enforcement, plugin architecture, and supply chain hardening. Proficient in Go and C++, with hands-on experience in kernel-level systems programming, container orchestration internals, and Kubernetes ecosystem development. Seeking Software Engineering roles in Systems, Cloud-Native, and Backend Development.

PROJECTS & OPEN SOURCE CONTRIBUTIONS

- KubeArmor (Apr 2026 – Jun 2026) Contributions
- Corrected silent policy enforcement failures, eliminated a goroutine leak in SystemMonitor, and fixed CA certificate loss during TLS rotation, increasing stability across the enforcement and operator layers.
 - Grew runtime test coverage from 74% to 86% reducing production regression risk, and improved OpenSSF Scorecard from 0/10 to 6/10 strengthening the project’s supply chain security posture.

- Headlamp (CNCF Kubernetes Dashboard (Apr 2026 – Jun 2026) Contributions
- Fixed a CronJob UI crash, silent Helm routing failures, and a test corrupting real user kubeconfig - increasing stability across frontend, Helm, and backend layers.
 - Broke a circular frontend module dependency unblocking static analysis, grew pkg/config test coverage from 74.2% to 83.9%, and added authenticated Helm repository support enabling private registry workflows.

- Distributed Linux Fleet Management Source
- Engineered a distributed fleet monitoring platform in C++ (Drogon) with a lightweight Linux agent collecting live /proc//sys metrics, and a zero-touch systemd-based onboarding pipeline that registers new nodes with a single generated shell command
 - Secured remote command execution with HMAC-SHA256 request signing, constant-time verification, and a server-side whitelist; built dual observability pipelines pairing a custom PostgreSQL-backed dashboard with self-hosted Prometheus/Grafana scraping

- File Encrypter / Decrypter Source
- Built a C++ CLI utility for protecting sensitive files at rest via recursive directory encryption, used a producer-consumer task queue with POSIX fork() for parallel file processing, cutting encryption time across large directory trees
 - Implemented flexible key derivation supporting hex, decimal, and UTF-8 key material; applied RAII smart pointers and move semantics to safely transfer file stream ownership across IO, Task, and ProcessManagement layers

- URL Shortener API Source
- Built a production-ready containerized REST API in Go (Fiber + Redis) for high-throughput link management, achieved sub-10ms redirect latency via Redis O(1) key lookups with TTL-based expiry and custom alias support
 - Enforced per-IP rate limiting using a dedicated Redis database logically isolated from link storage, preventing abuse while keeping redirect throughput unaffected, containerized with Docker Compose for reproducible deployment

EXPERIENCE

- Aeons Technologies | CertificateSep 2026 to Nov 2026Remote
- Full Stack Developer Intern
- Built and shipped full-stack features with React.js, Node.js, and MongoDB, improving application responsiveness by 30%
 - Architected scalable RESTful APIs reducing data retrieval latency by 20%; optimized MongoDB indexing strategies cutting query time significantly
 - Enforced input validation, error handling, and agile Git workflows to streamline CI and boost overall reliability

EDUCATION

- Bachelor of Technology in Electronics and Telecommunication Engineering2023 to 2027
- Shri Guru Gobind Singhji Institute of Engineering and Technology, NandedCGPA: 9.21

PUBLICATIONS

- Design and Development of a Collaborative Learning System for Interactive Two-Way EducationPaperIJEDR Vol.13 Issue 4, Nov 2026, pp.198–201, ISSN:2321-9939

TECHNICAL SKILLS

Languages: Go, C++, JavaScript, TypeScript, SQL, Shell, YAML, Python

Cloud Native / Security: Kubernetes, eBPF, KubeArmor, Docker, SLSA, OpenSSF Scorecard, GitHub Actions

Web: Next.js, React.js, Node.js, Express.js, Tailwind CSS, WebSocket, REST APIs

Databases: MySQL, MongoDB, PostgreSQL, Prisma

Observability: Prometheus, Grafana, Node Exporter

Tools: Linux, Git, Docker, Vercel, Render

PERFORMANCE HIGHLIGHTS

- LeetCode 1650+ (Top 14%): Solved 500+ problems with strong algorithmic and DSA fundamentals
- Academic Excellence: CGPA 9.21 in B.Tech Electronics and Telecommunication Engineering
