

EXPERIENCE

The Linux Foundation (LFX Mentorship) | Program

Sep 2026 to Nov 2026

LFX Mentee, CNCF Headlamp (Kyverno Plugin)

Remote

- Building a **Policy Impact Map** and a **Violation Drill-Down** in **React** and **TypeScript** for Headlamp's **Kyverno** plugin, so operators can see which live resources a policy matches and which rule rejected a failed PolicyReport
- Wiring **Prometheus** metrics into the plugin for live policy engine health, adding detail views for **Kyverno v2 CEL** policies, registering Kyverno as a Headlamp **Map** source, and closing the plugin's **i18n** and **accessibility** gaps

Aeons Technologies | Certificate

Sep 2025 to Nov 2025

Full Stack Developer Intern

Remote

- Shipped **React.js**, **Node.js**, and **MongoDB** features that cut page response time by **30%** by removing duplicate API calls
- Built scalable **RESTful APIs** and **MongoDB** compound indexes that reduced data retrieval latency by **20%**, with request validation and a shared error handling layer

PROJECTS & OPEN SOURCE CONTRIBUTIONS

Headlamp (CNCF Kubernetes Dashboard, Apr 2026 to Jun 2026) | Contributions

- Fixed a CronJob UI crash, silent Helm routing failures, and a test that corrupted real user kubeconfig files
- Broke a circular frontend module dependency unblocking static analysis, grew pkg/config test coverage from 74.2% to 83.9%, and added authenticated Helm repository support enabling private registry workflows

KubeArmor (CNCF eBPF Runtime Security Engine, Apr 2026 to Jun 2026) | Contributions

- Corrected silent policy enforcement failures, eliminated a goroutine leak in SystemMonitor, and fixed CA certificate loss during TLS rotation, increasing stability across the enforcement and operator layers
- Grew runtime test coverage from 74% to 86% and improved the project's OpenSSF Scorecard from 0/10 to 6/10

Distributed Linux Fleet Management | Source

- Engineered a distributed fleet monitoring platform in **C++ (Drogon)** with a lightweight Linux agent collecting live **/proc//sys** metrics, and a zero-touch **systemd**-based onboarding pipeline that registers new nodes with a single generated shell command
- Secured remote command execution with **HMAC-SHA256** request signing, constant-time verification, and a server-side whitelist; built dual observability pipelines pairing a custom **PostgreSQL**-backed dashboard with self-hosted **Prometheus/Grafana** scraping

File Encrypter / Decrypter | Source

- Built a **C++** CLI utility for protecting sensitive files at rest via recursive directory encryption, used a producer-consumer task queue with **POSIX fork()** for parallel file processing, cutting encryption time across large directory trees
- Implemented flexible **key derivation** supporting hex, decimal, and UTF-8 key material; applied **RAII** smart pointers and move semantics to safely transfer file stream ownership across IO, Task, and ProcessManagement layers

URL Shortener API | Source

- Built a production-ready containerized REST API in **Go** (Fiber + Redis) for high-throughput link management, achieved **sub-10ms** redirect latency via Redis **O(1)** key lookups with TTL-based expiry and custom alias support
- Enforced per-IP rate limiting using a dedicated Redis database logically isolated from link storage, preventing abuse while keeping redirect throughput unaffected, containerized with **Docker Compose** for reproducible deployment

EDUCATION

Bachelor of Technology in Electronics and Telecommunication Engineering

2023 to 2027

Shri Guru Gobind Singhji Institute of Engineering and Technology, Nanded

CGPA: 9.21

PUBLICATIONS

Design and Development of a Collaborative Learning System for Interactive Two-Way Education

IJEDR Vol.13 Issue 4, pp.198-201, ISSN:2321-9939

Paper

TECHNICAL SKILLS

Languages: Go, C++, JavaScript, TypeScript, SQL, Shell, YAML, Python

Cloud Native / Security: Kubernetes, Kyverno, KubeArmor, Helm, eBPF, Docker, SLSA, OpenSSF Scorecard, GitHub Actions

Web: Next.js, React.js, Node.js, Express.js, Tailwind CSS, WebSocket, REST APIs

Databases: MySQL, MongoDB, PostgreSQL, Redis, Prisma

Observability: Prometheus, Grafana, Node Exporter

Tools: Linux, Git, Docker, Vercel, Render

PERFORMANCE HIGHLIGHTS

- LeetCode Contest Rating 1678: Solved 600+ problems with strong algorithmic and DSA fundamentals
- Academic Excellence: CGPA 9.21 in B.Tech Electronics and Telecommunication Engineering
